

Best-in-class home
pain relief.

Now available from the
leader in spinal care.

ComforTrac units deliver non-surgical pain management solutions for patients covering a wide range of diagnoses.

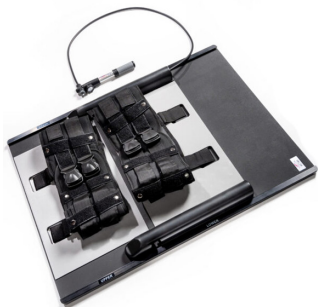

Backed by clinical research and 15,000 cycles of testing, ComforTrac traction devices manage pain and pressure in the cervical and lumbar spine. These products make it possible for patients to receive the same quality of care in the comfort of their home as they would during in-clinic physical therapy.

ComforTrac Cervical Traction

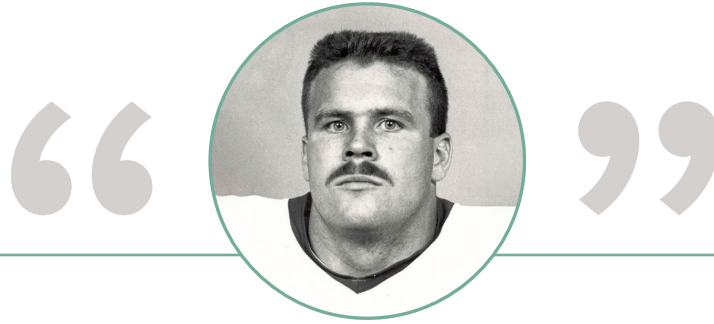

The ComforTrac cervical home traction unit is engineered to provide spinal decompression to help reduce neck pain and related conditions. Designed with the patented Quick Release pump and a contouring memory foam headrest, ComforTrac works by carefully stretching the spine vertebrae and muscles with the goal of improved mobility, range of motion, and alignment.

ComforTrac Lumbar Traction

The ComforTrac lumbar home traction unit delivers an innovative design for spinal decompression to help separate the vertebrae and alleviate lower back pain. Featuring lightweight, durable materials, an automatic carriage return, and a 'no set-up' design, the ComforTrac lumbar device provides maximum comfort, efficacy, and ease of use.

My physical therapist recommended a ComforTrac home cervical traction unit for continued and regular use. I have to say that I have had significant pain relief and no longer need pain medications. My sleep is more consistent and my numbness is much, much less. I have been using the ComforTrac traction unit for nearly two years now and I am very appreciative of this medical device as it has worked wonders for me. I wanted to thank you for getting this traction unit in the hands of those suffering from neck injuries as it has truly been a life saver for me.
